

Questions:

1. What is something you love about your home?
  - a. I love the four seasons-- winter is my favorite and many places just don't have it at all. Shoveling/Snowblowing is less than ideal, but the way snow can completely transform a landscape (and how a city functions) for a few days is downright magical.
2. What is your proudest accomplishment?
  - a. I have two college-level degrees (history, network administration) and almost a third (political science). Learning is one of my greatest passions, and with unlimited funding I would probably be a lifelong student, picking up degrees of interest.
3. What are some of your favorite hobbies?
  - a. I like to take long bike rides, am deeply interested in history, and enjoy watching films. Last year I watched nearly 100 movies, and set a new personal record for biking distance. Then my bike broke, just in time for winter to hit. Still gotta get that fixed.
4. Which of those hobbies do you enjoy the most?
  - a. I have a degree in history and have loved engaging with it since I was a child. Most frequently this is in the form of books (I'm always reading one), or via videogames that focus on historical fiction.
5. What do you do for a living?
  - a. I am a Systems Administrator for a staffing company. Basically I maintain our company's technological infrastructure, and when asked, seek out new solutions to problems.
6. What do you love most about your job?
  - a. The independent project focus-- given a goal, I am largely free to accomplish it as I see fit, as long as I can report back on progress and results. This also introduces a bunch of variety into my day-to-day, which I really appreciate.
7. What is something most people don't know about you?
  - a. I have found success as a part-time author, and make enough through it supplement my other income. Crafting characters and worlds is one of my favorite things in the world, and having found an audience for that has been very rewarding. I write under a pseudonym however, so its not well known!
8. Do you have any long term goals or aspirations?

- a. I want to travel extensively, with primary targets being London, Rome, and Tokyo. Until then I've been going all over the US, with major trips thus far including Washington DC, Philadelphia, and I plan to go to Yellowstone this year.
- 9. Who has been a significant role model for you and why?
  - a. Napoleon Bonaparte. His personal writings, particularly his history of Caesar and his personal letters, give a lot of great insight on how someone who literally changed the world lived day-to-day. His "mind cabinet", where he would limit stress and anxiety by visualizing putting away each topic of thought at the end of a day before bed, for example!
- 10. What is the most difficult challenge you have had to overcome?
  - a. In 2018 I was laid off from my job, and switched career paths. That involved going back to college for a second degree, then figuring out how to break into my desired field (technology). I've managed both and have been in my new job for two years now!

Christopher Boldt is Systems Administrator for a Staffing Company in the Green Bay area of Wisconsin. Living in Wisconsin allows him the chance to enjoy all four seasons, of which his favorite is winter for its ability to completely transform a landscape.

Christopher is an accomplished and passionate academic, with degrees in network administration and history. He changed careers in 2018 after being laid off from his previous job, after which he went back for his second degree in network administration (and has a desire to continue his education into a third). He has a love of history, which he continues to express in his taste in movies and games and has a little-known side-business as an independent author, where he publishes under a pseudonym.

His greatest role-model is Napoleon Bonaparte, of which Christopher has read his collected personal writings. He enjoys Napoleon's writings on Caesar and learning about how someone who did so much to change the world lived in his day to day (for instance, his 'mind cabinet', which involved visualizing putting away each topic of thought at the end of the day). In keeping with his love of history, Christopher loves to travel, and has visited Washington DC and Philadelphia, and intends to go to Yellowstone later this year. After that, he has plans to see London, Rome and Tokyo alongside his friends.

Christopher's hobbies include gaming, biking and watching movies. He watched over 100 movies last year alone, an activity he also enjoys doing with his friends.
